

## Clear Cookies/Website Data for Safari in MacOS (Macbook, iMac)

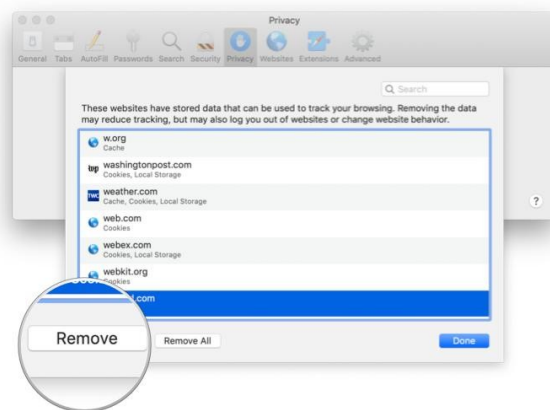

### How to remove website data

If you ever decide to remove website data from your Mac, you can do it selectively for certain websites or remove all the data.

1. From the Safari menu, choose **Preferences....**
2. Click the **Privacy** button.

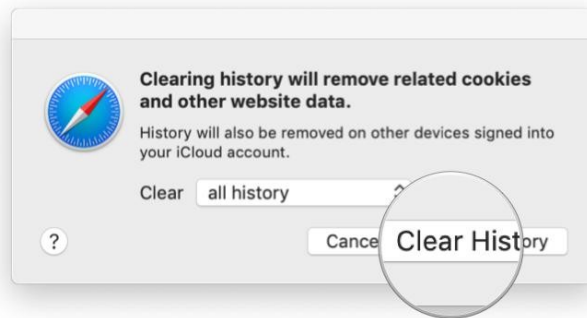

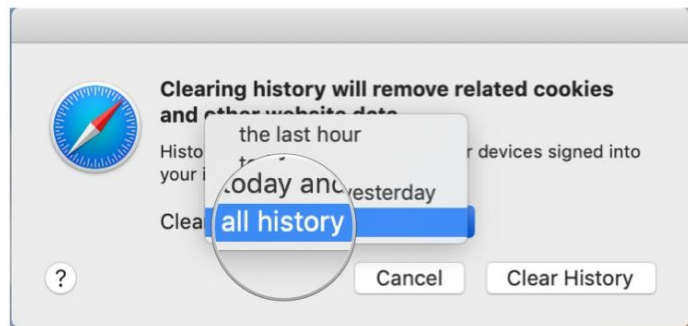

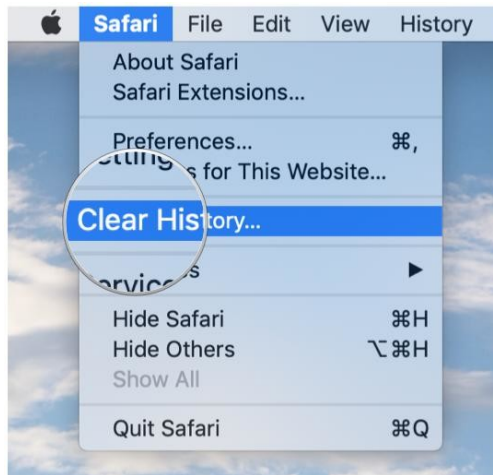

3. Click the **Manage Website Data...** button.
4. Select a website and click the **Remove** button to remove the site's cache, cookies, or local storage or click the **Remove All** button to delete data for all websites.

## How to clear your browsing history

Rather than root around through a set of checkboxes and pop-up menus, you can clear your browsing history, cookies, and website data with a menu command.

1. From the Safari menu, choose **Clear History...**
2. From the Clear pop-up menu, choose **how far back** you want to go.
3. Click **Clear History**.

In addition to the history of the website pages you've visited, you'll also give the heave-ho to recent searches, a list of items you have downloaded, the frequently visited site list, and other information.

If your Mac and other devices have Safari turned on in iCloud preferences, the clear history command will remove the browsing history from Safari on those other devices.
